At the Joint Baltic-Nordic Acoustical Meeting in Copenhagen on August 26 – 28, 2002 a paper dealing with the new Nordic Outdoor Propagation Model, NORD2000, was presented. Throughout the paper SoundPLAN was used intensively to show tendencies and principles in NORD2000. The paper is attached as a pdf-file.

We expect to be able to ship the next update of SoundPLAN, within a couple of months. The update will include the new version of SoundPLAN, version 6.0. The update will be spread to all customers, who bought a license within the previous year plus customers with a maintenance contract.

Version 6.0 will give you access to a preliminary implementation of NORD2000. The implementation will at that time NOT be fully tested, and we leave it up to your responsibility NOT to use the method for documentation. However, it is our hope that you will explore the capabilities of NORD2000 and report back to us, if you find the results hard to believe. As you know, sometimes users are the best testers. In time you will receive further information about version 6.0 as well as NORD2000 in SoundPLAN.
